(^{School withheld})

Pitch Type	Velocity	Spin Rate (RPM)	IVB	HB	Extension	Release Ht
Fastball	88.30	2218	14.13	-16.23	5.88	5.65
Changeup	81.64	1931	7.60	-16.55	5.58	5.72
Slider	80.88	2356	2.28	-1.88	5.22	5.56
Curveball	77.37	2472	-3.85	7.05	4.96	5.39

Pitch Shape Summaries:

Fastball: Sits 88-89 with moderate vert and extreme armside, shape is more like a 2S/Sinker than anything; zones heavily with tendency to miss middle

Changeup: 7 MPH off the FB with almost identical armside action and 7 inches more depth; mimics FB but dies quicker; release traits rather similar to FB (1 inch higher); go-to secondary against RHH due to heavy armside, pounds down and looks for chase with the pitch (43% chase, 43% whiff) (in short, vert and speed variability from FB, down)

Slider: Short break (gyro-type slider); leans on it heavily vs lefties, as the shape contrasts with the FB/CH; not a great whiff-inducer, nor a weak-contact inducer (.727 SLG against from LHH);

Curveball: Rarely ever used (more against lefties), but has distinct shape that makes movement plot better; negative IVB and moderate gloveside action (kind of slurvey looking); low extension/release height may make it stand out on release

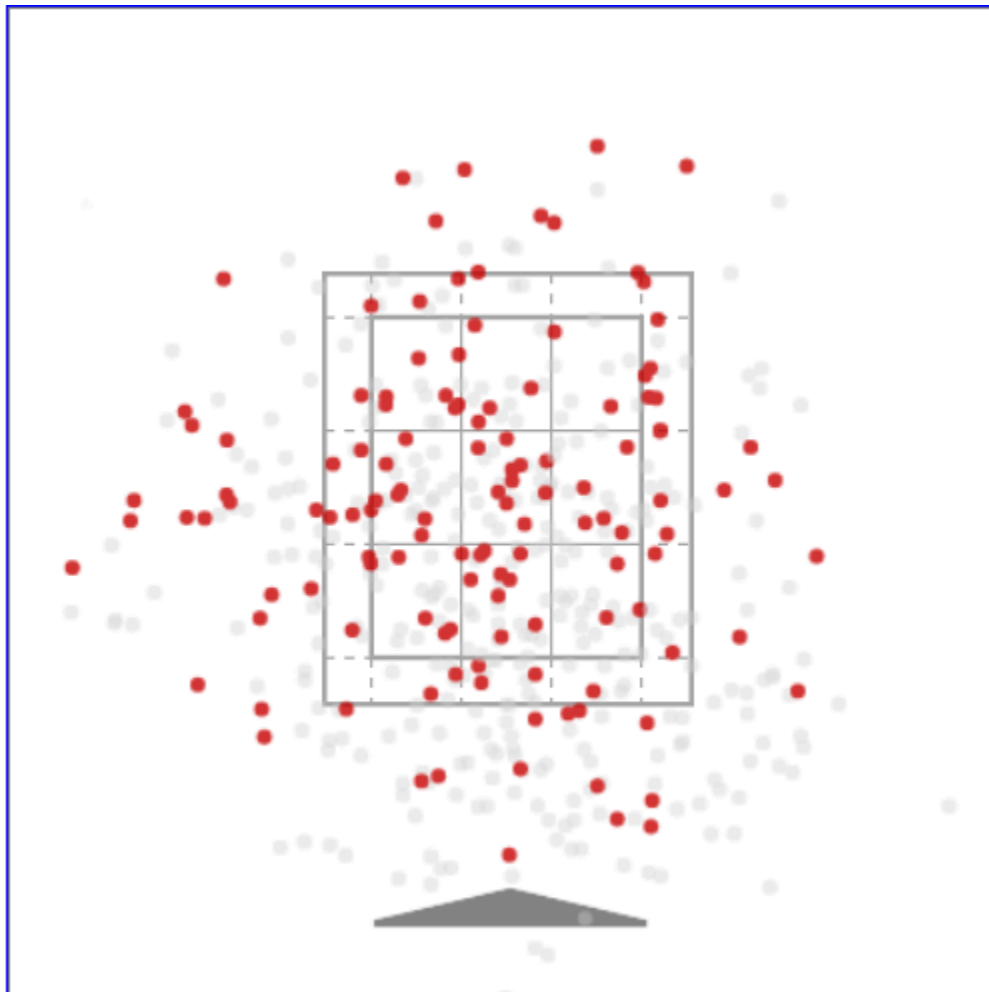

Cumulative Usage: FB (46% Usage), CH (31% Usage), SL (21% Usage), CB (3% Usage)

Usage By Handedness:

Vs. RHH: FB (45% Usage), CH (43% Usage), SL (11% Usage), CB (1% Usage)

Vs. LHH: FB (46% Usage), SL (35% Usage), CH (13% Usage), CB (6% Usage)

FB vs. RHH

- Sits 88-89 with moderate vert and extreme armside
- Shape is more like a 2S/Sinker than anything
- Zones heavily with tendency to miss middle (69% zone rate)
- 54% usage 0-0 against RHH, will try outer half first pitch
- Will drop usage in favor of CH if he gets ahead of a righty (49% CH vs. 38% FB), will try to work chase up/away in this spot and doesn't zone it much

-35% usage with 2 strikes (CH dominant), **however, with 2 strikes in particular, has tendency to leave middle** (appears to be full count FBs)

-**Bumps usage up to 55% when righty gets ahead**—will pound the zone middle/middle-away (70% zone)

-58% usage in 3 ball counts, will work lower half of the zone

CH vs. RHH

-7 MPH off the FB

-Almost **identical armside action and 7 inches more depth than FB**; mimics FB but dies quicker;

-Go-to secondary against RHH due to heavy armside, **pounds down and looks for chase with the pitch**

-43% chase, 43% whiff

-**80% of total CH bottom third+below zone; 75% outer two-thirds**

-37% zone rate

-31% usage first pitch (**39% zone, works heavily below zone first pitch**)

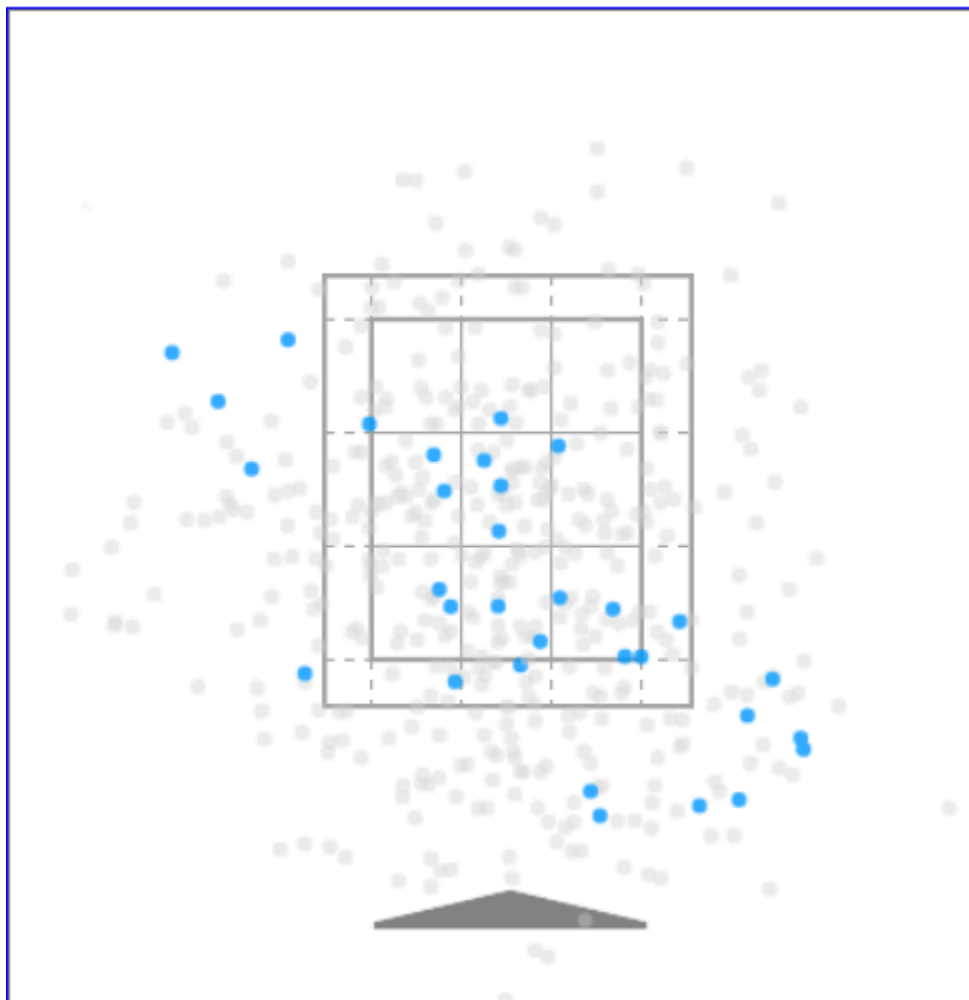

-**Ups usage to 49% when he gets ahead of RHH** (will look for chase down, 28% zone, everything down)

-46% usage with 2 strikes (**will work even less in the zone with 2 strikes—23% zone, everything down**)

-39% usage when RHH gets ahead in the count, still doesn't work in zone with the pitch, almost everything down and away in this spot

-

SL vs. RHH

-Short break (gyro-type slider)

-Leans on it heavily vs lefties (not RHH), as the shape contrasts with the FB/CH

-Not a great whiff-inducer, nor a weak-contact inducer

-Zones pitch at 60% clip

-Tends to leave pitch middle/middle down vs RHH

-14% usage first pitch, rarely ever zones (22%), with tendency to work down below zone

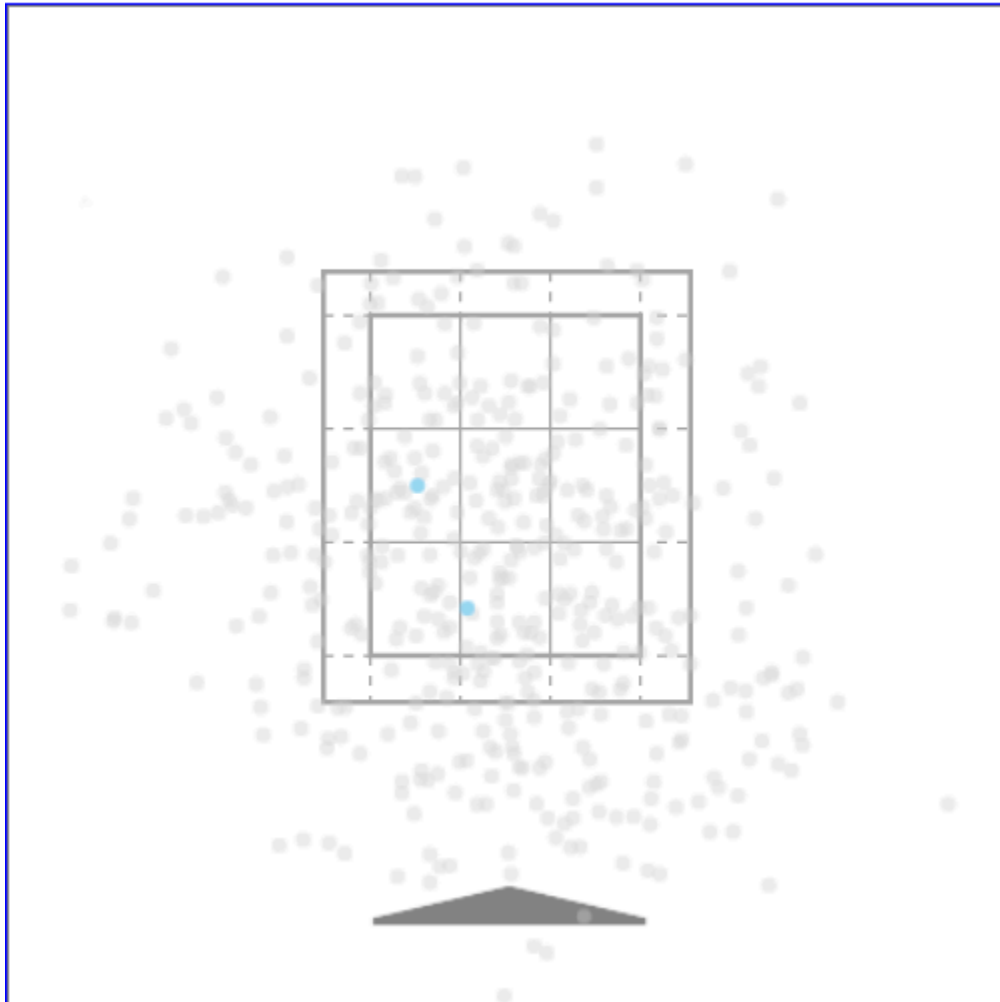

-12% usage when he gets ahead of a batter, small sample, but tends to pound the zone (88%), with tendency to leave middle-down

-18% usage with 2 strikes (leaves middle heavy) (69% zone)

-Will rarely, if ever throw if he falls behind a batter

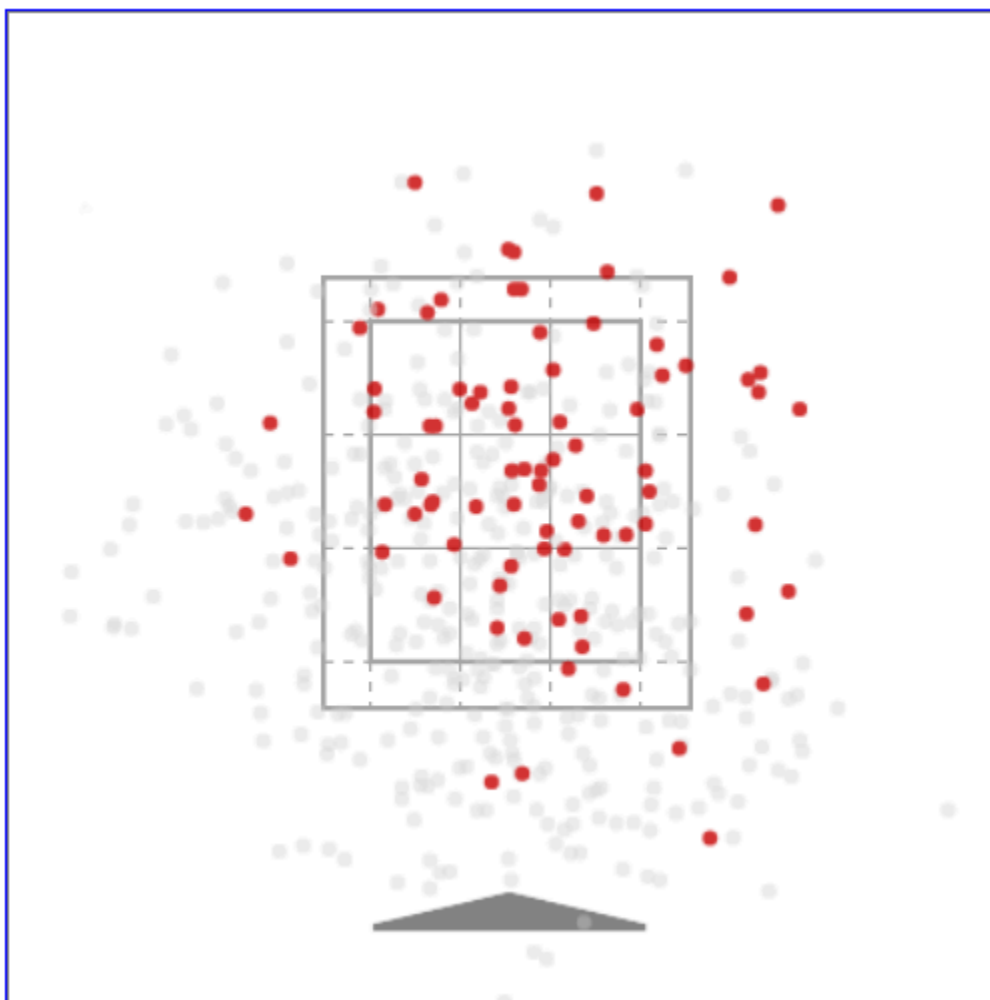

-Will rarely throw in 3 ball counts

CB vs. RHH

- Rarely ever used
 - 2 total vs. RHH (both in zone)
- Negative IVB and moderate gloveside action (kind of slurvey looking)
- Low extension/release height may make it stand out on release
- Respectively threw them both 0-0, and 0-1
 - 2 BIP, 2 1B

FB vs. LHH

-Sits 88-89 with moderate vert and extreme arm-side

-Shape is more like a 2S/Sinker than anything

-Zones at exceptionally high rate, (73% to LHH)

-Heavy tendency to work middle third of the zone (also will work upper third, but rarely throws FB down)

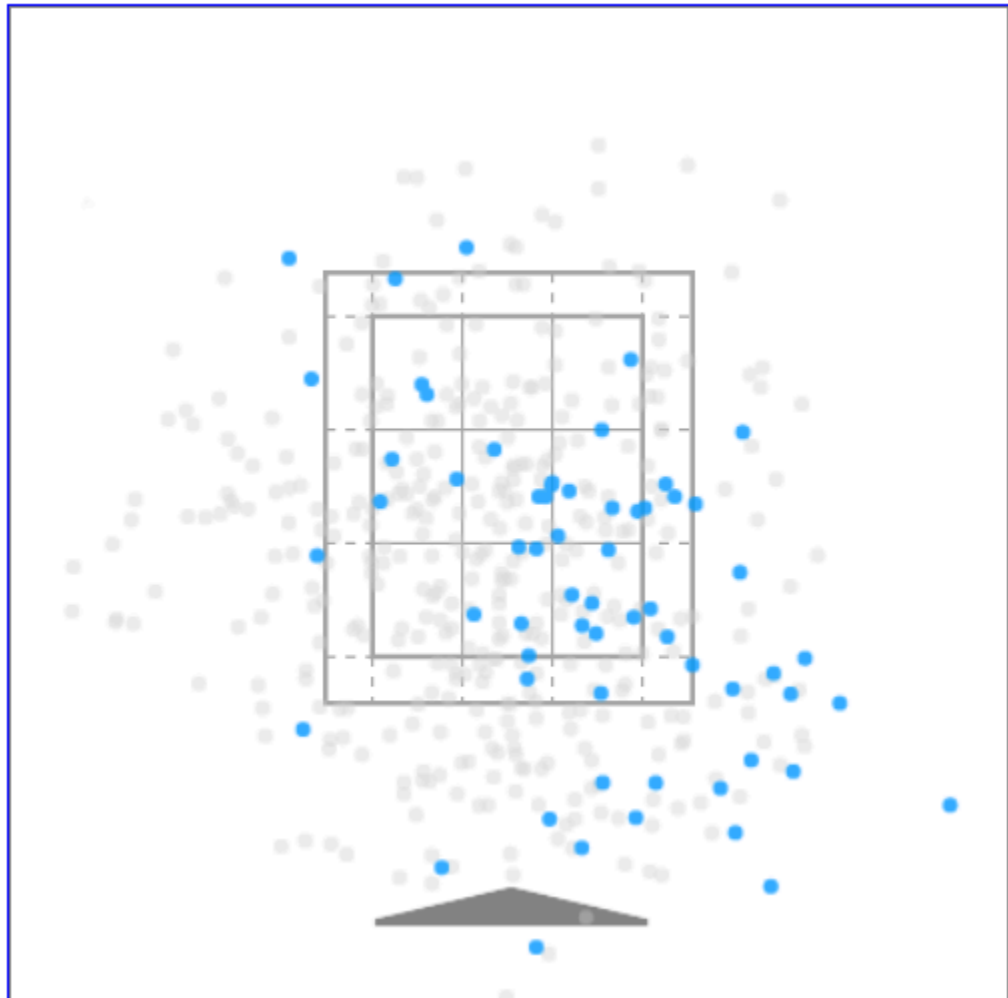

-48% usage first pitch (mixes almost evenly with breaking stuff (48% FB vs. 43% SL/CB), will zone at exceptionally high rate and work middle third (vertically))

-Usage drops when he gets ahead to 33% (favors SL more at 50%), will pound zone still with a heavy tendency to work upper half

-36% usage with 2 strikes (still favors SL more at 38%, comb'd with CB up to 58% breaking)

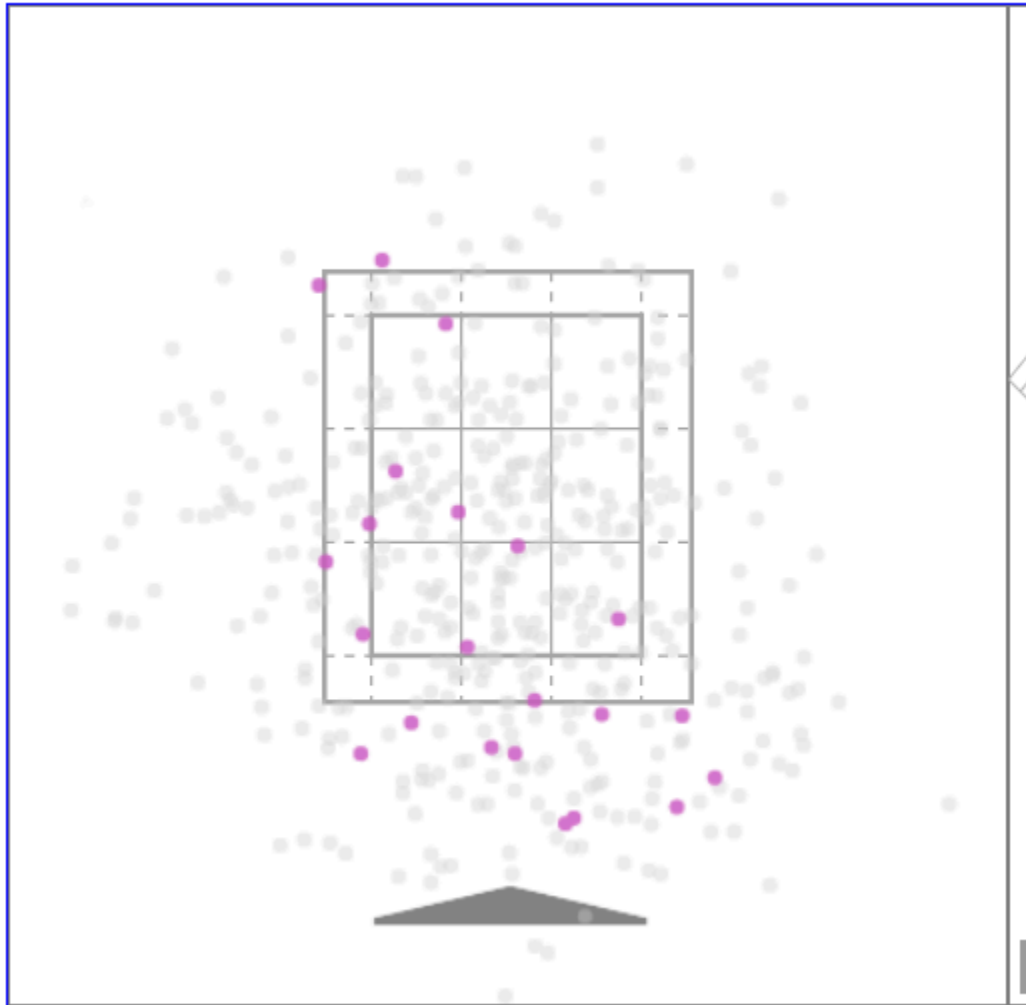

-Ups usage to 69% if LHH gets ahead in the count—works heavily in zone upper third

SL vs. LHH

- Short break (gyro-type slider)
- Leans on it heavily vs lefties, as the shape contrasts with the FB/CH
- Not a great whiff-inducer, nor a weak-contact inducer (**.727 SLG against from LHH**)
- 56% zone
 - Tendency to work low and away with the SL**
- 33% usage first pitch, heavy zone rate (75%), with heavy tendency to leave middle**
 - Comb'd with CB for 43% breaking stuff first pitch
- Ups usage heavily to 50% when he gets ahead of lefties (comb'd with CB for 64% breaking stuff in this spot), will look for chase down and away (more than half of total SL in this spot are low and away in the dirt)**
- 38% usage with 2 strikes, will continue looking for chase down and away**
- Drops usage heavily if LHH gets ahead (17%), will work down in the zone**

CH vs. LHH

-7 MPH off the FB

-Almost identical armside action and 7 inches more depth than FB; mimics FB but dies quicker;

-Drops usage heavily against lefties (13%)

-Will work heavily down and in with the change (armside boring in on LHH)

-Half of total CH are below zone

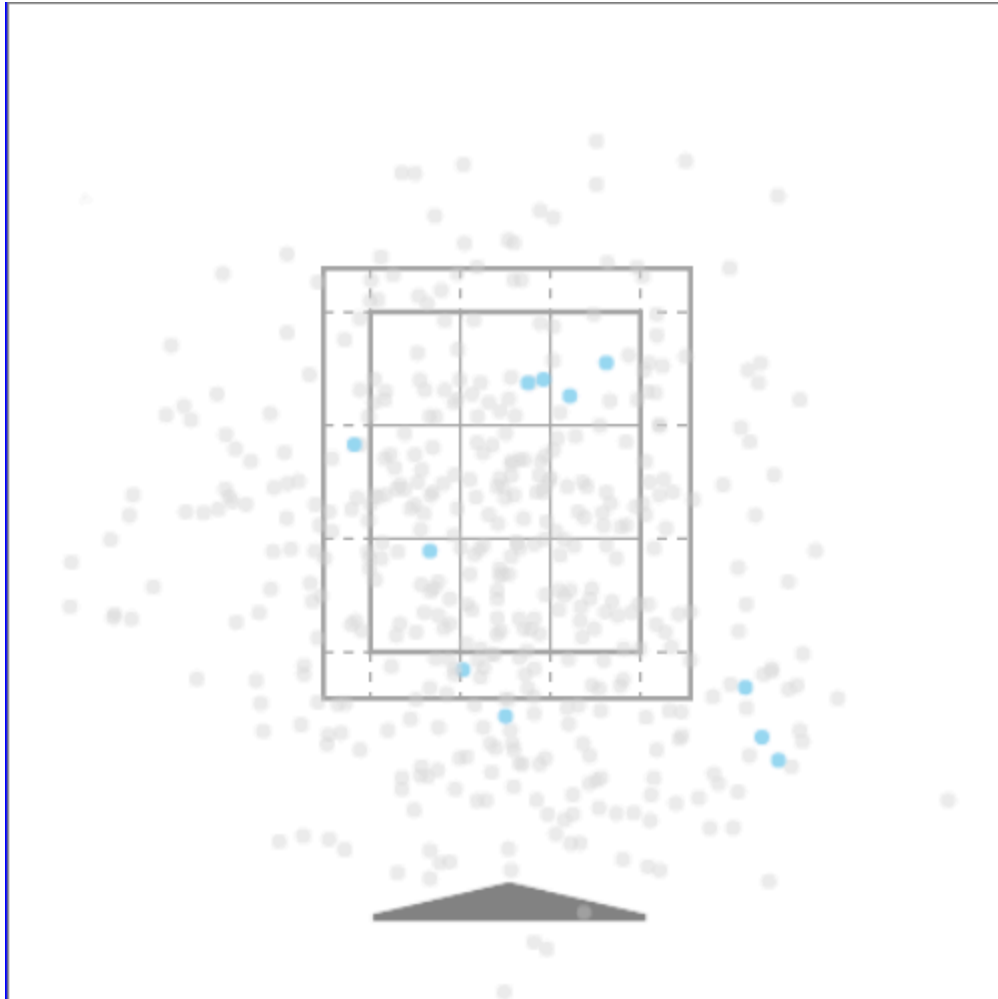

-Rarely ever uses 0-0 (8% usage), has thrown 4x total, 3 low and in

-14% usage if he gets ahead of a LHH (37% zone), will try for chase down

-20% usage with 2 strikes (continues trend of working low, 27% zone)

-14% usage when LHH gets ahead (threw 4x, zoned none)

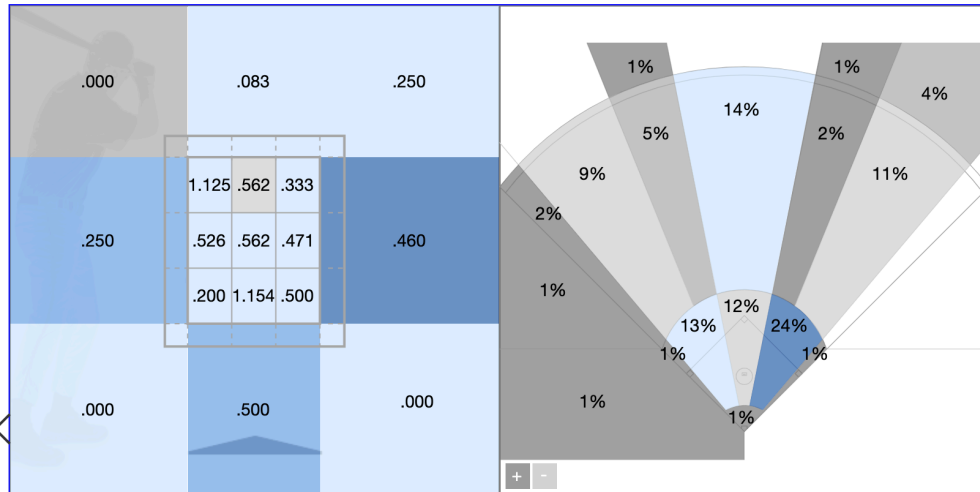

CB vs. LHH

- Rarely ever used
- Negative IVB and moderate gloveside action (kind of slurvey looking)**
- Low extension/release height may make it stand out on release**
- Threw 11 total to LHH, zoned 7, 4 in the upper third
- Threw 5 (11%) first pitch, zoned 4**
- Only threw 2x when he got ahead of a lefty (zoned one inner third, missed away on the other)**
- Threw 3x with 2 strikes, zoned 1 up, left the other two down and away)**
- Threw none with LHH ahead in the count**

Summary / Recommendation

Hitter B Weaknesses

Attack Plan

Hitter B struggles heavily against left-handed breaking balls, hitting just .143 in the zone with a 46% strikeout rate and high whiff rate. He has trouble with elevated fastballs at 86+ MPH, often losing posture and dropping his back leg. Low walk rates and high chase tendencies make him vulnerable to aggressive, well-mixed pitch sequences.

Hitter B Strengths

- Do Not Attack Here:

Hitter B handles right-handed breaking balls and fastballs well, hitting over .300 with an .820 OPS on breakers and posting a strong .740 OPS vs fastballs with low strikeouts and high walks. He sees 86+ MPH well from righties and punishes breaking balls in the zone with a .943 OPS. Against lefty offspeed, he's even more dangerous, hitting .400 with elite in-zone damage (1.142 OPS) and very few swing-and-miss issues—avoid throwing offspeed in the zone to him.

Summary / Recommendation

Hitter C Weaknesses

Shows plate discipline but struggles to do damage against right-handed fastballs and velocity, posting just a .303 SLG overall and .273 SLG vs 86+ MPH. While he controls the zone well, his high ground ball rate limits power output. He also struggles significantly against breaking balls from lefties, with low contact and no in-zone production—attack with elevated velocity and soft stuff away, especially from lefties.

Hitter C Strengths

Does damage against left-handed fastballs despite a low batting average, showing strong plate discipline (23% BB rate) and solid power (.455 SLG, 1 HR). He excels on fastballs low and inside, making that an area to avoid. Against right-handed breaking balls, he has a high swing-and-miss profile (31% K rate), low walk rate (2%), and only modest production.

Summary / Recommendation

- **Hitter D Weaknesses** – Struggles against right-handed breaking balls, posting just a .154 AVG and 37% miss rate despite a low 17% swing rate, indicating a strong vulnerability when forced to swing. Shows limited power output against fastballs from either side, with a modest .457 SLG vs RHP and .400 SLG vs LHP. Though disciplined, he chases at a 22–25% clip on fastballs, and his batted ball profile (41% ground balls) suggests limited slugging upside. He has shown no success against left-handed offspeed (0-for-4, 50% miss), making it a viable weapon in late counts.
- **Hitter D Strengths** – Disciplined hitter with consistent on-base skills — OBP over .400 vs both RHP and LHP fastballs. Shows solid contact ability against left-handed breaking balls (.417 AVG, .583 SLG, 18% chase) and right-handed offspeed (.400 AVG, 0% miss), indicating he handles soft stuff well if not set up properly. Keeps his spray chart relatively balanced, with nearly even distribution across all fields, making it tougher to shift against.
- **Recommendation** – Right-handers should attack with breaking balls early and often, taking advantage of his low swing and high miss rates. Elevate fastballs late to induce weak contact or chase. Lefties can mix in breaking balls and high fastballs, while avoiding offspeed in-zone unless ahead in the count.

- AVG .308 / OBP .308 / SLG .615 / OPS .923

- [illegible]

- **Hitter E Weaknesses** – Struggles significantly against breaking balls from both righties and lefties, with a combined average of just .157 and SLG below .270. His swing rates are moderate (~44%), but he posts high miss rates (29–31%) and chase rates (30–32%). Power output is limited overall, especially from the right side: just a .344 SLG vs LHP fastballs and .367 vs RHP. Despite switch-hitting ability, there's no significant jump in production from either side.
- **Hitter E Strengths** – Very disciplined hitter with an OBP over .410 vs fastballs from both sides, showing a patient approach and zone control. He's most effective against offspeed pitches, especially from lefties (.308 AVG / .615 SLG / .923 OPS), where his aggressive approach (52% swing rate) turns into damage. Also handles fastballs with consistent contact and keeps a highly balanced spray chart.
- **Recommendation** – Avoid offspeed in predictable counts, especially from left-handed pitchers. Attack with breaking balls both early and late, where chase and miss rates climb sharply. Fastballs can be effective when elevated or run in, particularly early in counts before he gets comfortable. Maintain a standard defensive alignment due to his balanced spray.

- Swing: 33%, Miss: 0%, Chase: 0%

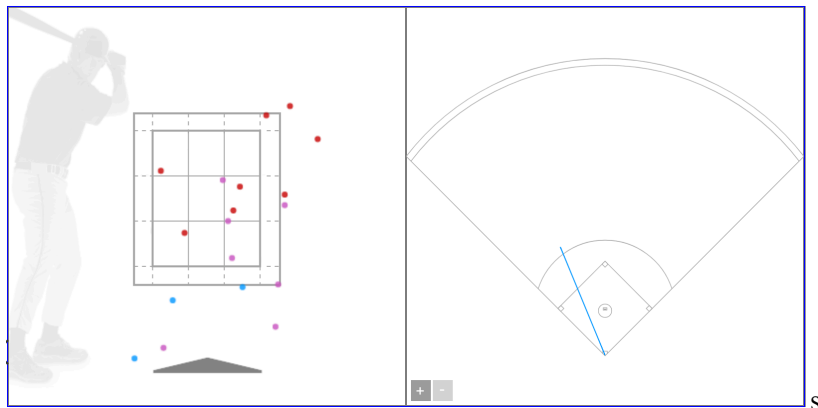

Summary / Recommendation

- **Weaknesses** – No hits against the change up this past spring. Anything inner third, you should see success against Hitter F
- **Strengths** – Hammers pitches middle and middle away. He likes to see fastballs deep and take them opposite field. Over half of his batted in play fastballs on the ground go the other way. However its just the opposite for breakers and off speed, all are pulled or up the middle. He doesnt swing and miss often on breaking pitches. 5 misses against 27 breaking balls for strikes thrown against him. Does not chase breakers out of the zone very often, 0% chase rate on 48 total pitches
